FOURTH-QUARTER AND FULL-YEAR HIGHLIGHTS

• Commercial Banks Earn \$10.7 Billion in Fourth Quarter

Fourth-quarter net income of \$10.7 billion was \$55 million below the level of a year ago. A major reason for the decline was a \$1.3-billion swing in banks' proceeds from securities sales. In the fourth quarter of 1993, sales of securities netted \$392 million in pre-tax profits; in the fourth quarter of 1994, securities sales produced a \$914-million net loss. The change from a net profit to a net loss reflects the negative impact of higher interest rates on the market value of banks' securities holdings.

• Full-Year 1994 Earnings Set New Record of \$44.7 Billion

Industry earnings for the full year represent an increase of \$1.6 billion from 1993's \$43.1 billion. The main areas of earnings improvement were net interest income, which increased by \$7.3 billion, and loan-loss provisions, which were \$5.9 billion lower. The increase in net interest income was due to strong loan growth during the year, while the reduction in loan-loss provisioning was attributable to the improving outlook for asset quality.

• Loan Growth Continues to Exhibit Momentum

Total loans held by commercial banks registered their largest quarterly increase ever in the fourth quarter, rising by \$77.8 billion. This surpassed the previous record of \$71.9 billion, achieved in the fourth quarter of 1986. For the full year, loans grew by \$208.4 billion, or 9.7 percent. This was the largest dollar increase in loans of any year in the industry's history, and the largest percentage growth since 1984, when loans grew by 14.5 percent. All major loan categories showed growth in 1994.

• Troubled Assets Decline Further, to Record Low Proportions

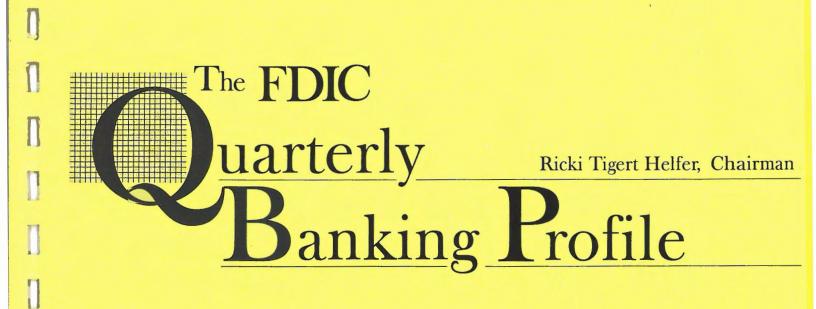

Banks' holdings of noncurrent loans and other real estate owned shrank to 1.01 percent of industry assets during 1994, from 1.61 percent at the beginning of the year. This is the lowest proportion in the thirteen years that banks have reported noncurrent loan amounts. Mirroring the improvement in asset quality, net loan losses for the year fell to \$11.2 billion, a decline of 35.9 percent from the previous year. This is the smallest dollar amount of net charge-offs reported since banks charged-off \$10.8 billion in 1984.

• Savings Institutions Earn \$6.4 Billion in 1994

Full-year net income of the nation's 2,152 insured savings institutions was \$431 million less than the industry earned in 1993. Rising interest rates reduced thrifts' net interest margins, producing a \$1.6-billion decline in net interest income. Higher interest rates also were largely responsible for a \$428-million reduction in proceeds from sales of securities, from a \$400-million net profit in 1993 to a \$28-million net loss in 1994.

FDIC Quarterly Banking Profile Fourth Quarter 1994

FDIC-Insured Commercial Banks

Commercial Banks Make More Credit Available

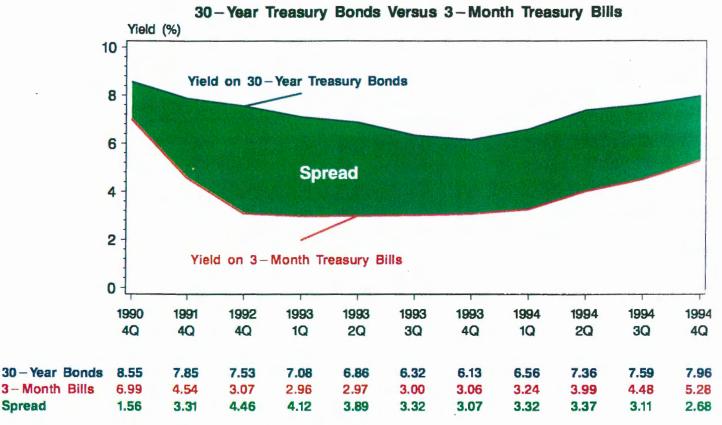

Most of the loan growth has occurred in real estate loans. In the fourth quarter of 1994, home mortgage loans increased by \$18.9 billion, credit card loans increased by \$17.0 billion, and commercial and industrial loans increased by \$13.7 billion.

Most of the growth in loan commitments has occurred in unused credit card commitments. In the fourth quarter of 1994 unused credit card commitments increased \$47.0 billion and unused commitments for loans to businesses and consumers increased \$34.1 billion.

*YTD ROA minus ROA for the same period one year ago equals change in basis points. Basis point = 1/100 of a percent. Results for the four states with the highest ROAs (NV, SD, DE & NH) were significantly influenced by the presence of large credit card operations.

*Other borrowed funds include federal funds purchased, securities sold under agreement to repurchase, FHLB and FRB borrowings and other indebtedness.

**Accounting changes affect amounts reported for December 31, 1994. See Notes to Users.

This publication contains financial data and other information for depository institutions insured by the Federal Deposit Insurance Corporation (FDIC). These notes are an integral part of this publication and provide information regarding the comparability of source data and reporting differences over time. The information presented in the *FDIC Quarterly Banking Profile* is divided into the following groups of institutions:

FDIC-Insured Commercial Banks

This section covers commercial banks insured by the FDIC either through the Bank Insurance Fund (BIF) or through the Savings Association Insurance Fund (SAIF). These institutions are regulated by and submit financial reports to one of the three federal commercial bank regulators (the Board of Governors of the Federal Reserve System, the FDIC or the Office of the Comptroller of the Currency).

FDIC-Insured Savings Institutions

This section covers savings institutions insured by either BIF or SAIF that operate under state or federal banking codes applicable to thrift institutions, except for one self-liquidating institution primarily funded by the FSLIC Resolution Fund (FRF). Savings institutions that have been placed in Resolution Trust Corporation conservatorship are also excluded from these tables while in conservatorship. The institutions covered in this section are regulated by and submit financial reports to one of two Federal regulators — the FDIC or the Office of Thrift Supervision (OTS).

FDIC-Insured Institutions by Insurance Fund

Summary balance-sheet and earnings data are provided for commercial banks and savings institutions according to insurance fund membership. BIF-member institutions may acquire SAIF-insured deposits, resulting in institutions with some deposits covered by both insurance funds. Also, SAIF members may acquire BIF-insured deposits. The insurance fund membership does not necessarily reflect which fund insures the largest percentage of an institution's deposits. Therefore, the BIF-member and the SAIFmember tables each include deposits from both insurance funds. Depository institutions that are not insured by the FDIC through either the BIF or SAIF are not included in the FDIC Quarterly Banking Profile. U.S. branches of institutions headquartered in foreign countries and non-deposit trust companies are not included. Efforts are made to obtain financial reports for all active institutions. However, in some cases, final financial reports are not available for institutions that have closed or converted their charter.

DATA SOURCES

The financial information appearing in this publication is obtained primarily from the Federal Financial Institutions Examination Council (FFIEC) *Call Reports* and the OTS *Thrift Financial Reports* submitted by all FDIC-insured depository institutions. This information is stored on and retrieved from the FDIC's Research Information System (RIS) data base.

COMPUTATION METHODOLOGY

Certain adjustments are made to the OTS *Thrift Financial Reports* to provide closer conformance with the reporting and accounting requirements of the FFIEC *Call Reports*. The detailed schedules of the *Thrift Financial Report* reflect the consolidation of the parent thrift with all finance subsidiaries. All other subsidiaries are reported as investments on an equity basis or a cost basis. Some accounting differences exist, such as asset sales with recourse, for which the data necessary to reconcile these differences are not reported.

All asset and liability figures used in calculating performance ratios represent average amounts for the period (beginning-of-period amount plus end-of-period amount plus any interim periods, divided by the total number of periods). For "pooling-of-interest"

mergers, the assets of the acquired institution(s) are included in average assets since the year-to-date income includes the results of all merged institutions. No adjustments are made for "purchase accounting" mergers. Growth rates represent the percentage change over a 12-month period in totals for institutions in the base period to totals for institutions in the current period. Tables III and IV do not provide growth rates for the "Asset Size Distribution" since many institutions migrate between size groups.

Asset Migrations

All data are collected and presented based on the location of each reporting institution's main office. When a main office is relocated to another state, adjustments to prior-period data may be made to more accurately reflect geographic growth rates. In other situations, no adjustments are possible. For example, reported data may include assets and liabilities located outside of the reporting institution's home state. Also, institutions may change their charters, resulting in an inter-industry migration, e.g. savings institutions can convert to commercial banks. These situations can affect state and regional totals.

RECENT ACCOUNTING CHANGES

FASB Statement 115, "Accounting for Certain Investments in Debt and Equity Securities." Requires that securities that are not held in trading accounts be measured at either amortized cost or fair (market) value, depending on their classification category. Securities classified as held-to-maturity are to be measured on an amortized cost basis; securities classified as available-for- sale are to be measured at fair value with any unrealized appreciation or depreciation, net of tax effects, reported in a separate component of equity capital. FASB 115 must be adopted for Call Report purposes for fiscal years beginning after December 15, 1993, with earlier application permitted in certain circumstances. It is noted that some institutions chose to adopt FASB 115 at an earlier date. Prior to the adoption of FASB 115, securities not held in trading accounts were measured at amortized cost if classified as held-tomaturity, or lower of cost or market if classified as held-for-sale.

FASB Interpretation 39, "Offsetting of Amounts Related to Certain Contracts." Covers fair value amounts recognized as assets and liabilities on the balance sheet for off-balance sheet derivative contracts under which the amounts to be received or paid or items to be exchanged depend on future events or other factors (eg., future and forward contracts, interest rate swaps, exchange rate swaps, and other conditional and exchange contracts). FASB Interpretation 39 specifies that for these types of contracts it is improper to net related assets and liabilities on financial statements, unless a right of setoff exists. A list of specific criteria must be met for the right of setoff to exist. FASB interpretation 39 must be adopted for fiscal years beginning after December 15, 1993. Prior to adoption of FASB Interpretation 39, asset and liability amounts for these types of contracts were typically reported as net amounts on the Call Report without regard to setoff.

DEFINITIONS (in alphabetical order)

Capital category distribution — each institution's capital category is calculated or estimated from its financial report and does not reflect supervisory upgrades or downgrades:

F	Total Risk-Base Capital *	d F	Tier 1 Risk-Based Capital *		Tier 1 everage	Tangible Equity
Well-capitalized	≥10%	and	≥6%	and	≥5%	
Adequately capitalized	≥8%	and	≥4%	and	≥4%	_
Undercapitalized	<8%	or	<4%	or	<4%	
Significantly	<6%	01	<3%	~	<3%	
undercapitalized		or	<3%	or	<3%	_
Critically undercapitaliz	.ed				_	≤2%

*As a percentage of risk-weighted assets.

Construction and development loans — includes loans for all property types under construction, as well as loans for land acquisition and development.

Loans secured by real estate — includes home equity loans, junior liens secured by 1-4 family residential properties and all other loans secured by real estate.

Loans to individuals — includes outstanding credit card balances and other secured and unsecured consumer loans.

Mortgage-backed securities — certificates of participation in pools of residential mortgages and collateralized mortgage obligations issued or guaranteed by government-sponsored or private enterprises. Effective 3/31/94, the full implementation of FASB 115 meant that a portion of banks' mortgage-backed securities portfolio is now reported based upon fair (market) values; previously, all mortgage-backed securities not held in trading accounts were reported at either amortized cost or lower of cost or market.

Net charge-offs — total loans and leases charged off (removed from balance sheet because of uncollectibility), less amounts recovered on loans and leases previously charged off.

Net interest margin — the difference between interest and dividends earned on interest-bearing assets and interest paid to depositors and other creditors, expressed as a percentage of average earning assets. No adjustments are made for interest income that is tax exempt.

Net operating income — income excluding discretionary transactions such as gains (or losses) on the sale of investment securities and extraordinary items. Income taxes subtracted from operating income have been adjusted to exclude the portion applicable to securities gains (or losses).

Noncurrent assets — the sum of loans, leases, debt securities and other assets that are 90 days or more past due, or in nonaccrual status. Noncurrent debt securities and other assets were not included prior to March 1991.

Noncurrent loans & leases — the sum of loans and leases 90 days or more past due, and loans and leases in nonaccrual status.

Off-balance-sheet derivatives — represents the sum of the following: interest-rate contracts, defined as: the notional value of interest-rate swaps, futures and forward contracts and option contracts; foreign-exchange-rate contracts and commodity and equity contracts (defined similarly to interest-rate contracts).

Futures and forward contracts — a contract in which the buyer agrees to purchase and the seller agrees to sell, at a specified future date, a specific quantity of underlying at a specified price or yield. These contracts exist for a variety of underlyings, including the traditional agricultural or physical commodities, as well as currencies and interest rates. Futures contracts are standardized and are traded on organized exchanges which set limits on counterparty credit exposure. Forward contracts do not have standardized terms, and are traded over the counter.

Option contracts — a contract in which the buyer acquires the right to buy from or sell to another party some specified amount of underlying at a stated price (strike price) during a period or on a specified future date, in return for compensation (such as a fee

or premium). The seller is obligated to purchase or sell the underlying at the discretion of the buyer of the contract.

Swaps — an obligation between two parties to exchange a series of cash flows at periodic intervals (settlement dates), for a specified period. The cash flows of a swap are either fixed, or determined for each settlement date by multiplying the quantity of the underlying (notional principal) by specified reference rates or prices. Except for currency swaps, the notional principal is used to calculate each payment but is not exchanged. to buy from or sell to another party some specified amount of underlying at a stated price (strike price) during a period or on a specified future date, in return for compensation (such as a fee or premium). The seller is obligated to purchase or sell the underlying at the discretion of the buyer of the contract.

Other real estate owned — primarily foreclosed property. Direct and indirect investments in real estate ventures are excluded. The amount is reflected net of valuation allowances. For institutions that file a *Thrift Financial Report* (TFR), the valuation allowance subtracted also includes allowances for other repossessed assets. Also, for TFR filers the components of other real estate owned are reported gross of valuation allowances.

"Problem" institutions — Federal regulators assign a composite rating to each financial institution, based upon an evaluation of financial and operational criteria. The rating is based on a scale of 1 to 5 in ascending order of supervisory concern. "Problem" institutions are those institutions with financial, operational, or managerial weaknesses that threaten their continued financial viability. Depending upon the degree of risk and supervisory concern, they are rated either a "4" or "5". For all BIF-member institutions, and for all SAIF-member institutions for which the FDIC is the primary federal regulator, FDIC composite ratings are used. For all SAIFmember institutions whose primary federal regulator is the OTS, the OTS composite rating is used.

Return on assets — net income (including gains or losses on securities and extraordinary items) as a percentage of average total assets. The basic yardstick of bank profitability.

Return on equity — net income (including gains or losses on securities and extraordinary items) as a percentage of average total equity capital.

Risk-weighted assets — assets adjusted for risk-based capital definitions which include on-balance-sheet as well as off-balance-sheet items multiplied by risk-weights that range from zero to 100 percent. A conversion factor is used to assign a balance sheet equivalent amount for selected off-balance-sheet accounts.

Securities — excludes securities held in trading accounts. Effective 3/31/94, the full implementation of FASB 115 meant that a portion of banks' securities portfolios is now reported based upon fair (market) values; previously, all securities not in held trading accounts were reported at either amortized cost or lower of cost or market.

Troubled real estate asset rate — noncurrent real estate loans plus other real estate owned as a percent of total real estate loans and other real estate owned.

REGIONS

- Northeast Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Puerto Rico, Rhode Island, Vermont, U.S. Virgin Islands
